Agile product management tools:

Jira:

Jira is a widely used tool developed by Atlassian. It supports Agile methodologies, including Scrum and Kanban. Jira allows teams to create and manage user stories, plan sprints, track progress, and collaborate on projects.

Trello:

Trello is a visual project management tool that uses boards, lists, and cards to help teams organize and prioritize work. It's user-friendly and is often used for smaller teams or projects.

Asana:

Asana is a versatile project management tool that supports Agile workflows. It allows teams to create tasks, set priorities, and track progress. Asana provides flexibility for different project management methodologies.

VersionOne:

VersionOne is an Agile project management tool designed specifically for supporting Scrum, Kanban, and SAFe (Scaled Agile Framework) methodologies. It offers features for release planning, backlog management, and collaboration.

Targetprocess:

Targetprocess is a visual management tool that supports various Agile frameworks. It provides features for backlog management, release planning, and visualizing work progress through customizable views.

Monday.com:

Monday.com is a work operating system that can be adapted to Agile workflows. It offers features for task management, collaboration, and project tracking. It's highly customizable to fit different team needs.

Pivotal Tracker:

Pivotal Tracker is a tool designed for Agile development, particularly for Scrum and Kanban. It focuses on story-based planning and provides a simple interface for tracking and managing work.

Clubhouse:

Clubhouse is an Agile project management tool that supports Scrum and Kanban. It offers features for backlog management, iteration planning, and progress tracking.

ZenHub:

ZenHub is an extension for GitHub that integrates directly into GitHub's interface. It adds project management features like boards, epics, and reports, making it convenient for development teams using GitHub.

Axosoft:

Axosoft is a project management tool that supports Agile methodologies and is known for its Scrum-oriented features. It includes features for backlog management, sprint planning, and release tracking.

GitLab Boards:

GitLab, known for its version control features, also provides boards for project management. It integrates seamlessly with Git repositories, making it suitable for development teams practicing Agile.
